- **The Hearing Health Foundation (HHF)**'s next Emerging Research Grants (ERG) grant program provides seed money to researchers with innovative approaches to hearing and balance science. Grantees advance knowledge in the following under-researched areas, among others:
 - Hearing loss in children
 - Auditory processing disorder
 - Hyperacusis
 - Tinnitus
 - Ménière's disease
 - Usher syndrome
 - Reducing the ototoxicity of cancer drugs
 - Links between hearing loss and diabetes and heart and kidney disease

Expiration Date: January 8, 2022

Related Announcements

PA-18-418 "NIBIB Research Project Grant (R01 Clinical Trial Required)"

PA-19-056 "NIH Project Grant (Parent R01 Clinical Trial Not Allowed)"

Issued by

National Institute of Biomedical Imaging and Bioengineering (NIBIB)

Purpose

The purpose of this Notice is to inform potential applicants to the National Institute of Biomedical Imaging and Bioengineering (NIBIB) of an area of special interest in developing physiological sensors for application in trauma care.

Background

Trauma care focuses on the critical time immediately after an injury or acute shock, in an event that may affect one person or many. Termed "the golden hour," the exact window of time depends on many variables, including the patient's underlying health, the nature of the traumatic occurrence, the scale of casualties, and the equipment and expertise at hand. The trauma environment is constantly changing due to ongoing injury, the possible involvement of multiple tissue types, modulation by the immune system, and/or infection. To broadly address trauma care the National Institute of Biomedical Imaging and Bioengineering (NIBIB), Uniformed Services University of the Health Sciences (USUHS),

59 MDW/ST Summary of Funding Announcements for September 2020

and Food and Drug Administration (FDA) cosponsored a workshop on March 21–22, 2019 to link the needs of the Department of Health and Human Services and the Department of Defense with nascent bioimaging and bioengineering solutions. Among the biotechnological gaps identified at the meeting, biological monitoring devices that can be deployed outside of the hospital setting, including use of devices well beyond a literal hour of time before reaching a hospital, are sought to address the complex spectrum of needs. Additionally, a high priority across technologies and settings are novel approaches to effectively collecting, accessing, and using data associated with trauma care.

Research Objectives

This Notice invites research projects that seek to fill gaps in trauma care such as rapid triage and accurate risk assessment through the development of physiological monitors, biochemical agent detectors, and point of care technologies capable of operating in dynamic environments. Applications should involve expertise across multiple disciplines as relevant to the proposed research. Applications can address different technology development stages, from early technology development to testing in animal models and human subject research. Projects focused on the development of sensing modalities should prioritize wearable and minimally invasive sensors (e.g. microneedle patches). Projects proposing to integrate sensors into armbands / wrist watches or enable the sensor readout through a smartphone application are not appropriate for this Notice.

NIBIB Statement of Interest

The NIBIB is interested in projects focused on developing new acquisition and interpretation hardware and software for non-invasive and minimally invasive physiological monitors (e.g. microneedle patches), diagnostic, and therapeutic techniques to be used in the dynamic trauma environment. Topics identified as high interest include, but are not limited to, the following:

- Advance algorithm and deep learning techniques for continuous analysis and interpretation of multiple physiological data streams from multiplexed sensors
- Sensors for noninvasive or minimally invasive measurement of relevant biochemical markers and vital signs (e.g. O₂ saturation), pathogens, biochemical agents, or hormones in biofluids (e.g. sweat, saliva, interstitial fluid)
- Rapid toxicology screening systems
- Small, portable, rugged devices capable of autonomous operation, utilizing flexible materials for improved wearability and ease of operation, and offering optical or sound-based readout options
- Closed loop electrocardiogram systems with digital health readouts
- Portable technologies utilizing sensor arrays for pulmonary disease diagnostics
- Technologies for wound diagnostics

Application and Submission Information:

This Notice applies to due dates on or after October 5, 2019 and subsequent receipt dates through January 8, 2022.

Applications for this Notice must submit an application through NIH Parent Announcement PA-19-056: NIH Research Project Grant (Parent R01 Clinical Trial Not Allowed) or, if you are proposing a clinical trial, to PA-18-418: NIBIB Research Project

Grant (Parent R01 Clinical Trial Required). Note that applications to PA-18-418 should propose early-stage clinical trials through Phase I, first-in-human, safety, feasibility or other small clinical trials that inform early-stage technology development. NIBIB will not support applications proposing Phase II, III, IV or pivotal clinical trials or trials in which the primary outcome is efficacy, effectiveness or a post-market concern.

All instructions in the SF424 (R&R) Application Guide and the funding opportunity announcement used for submission must be followed, with the following additions:

- For funding consideration, applicants must include "NOT-EB-19-018" (without quotation marks) in the Agency Routing Identifier field (box 4B) of the SF424 R&R form. Applications without this information in box 4B will not be considered for this initiative.

Applications nonresponsive to terms of this NOSI will be not be considered for the NOSI initiative.

- **Ecology and Evolution of Infectious Diseases (EEID)**

Synopsis of Program:

The multi-agency Ecology and Evolution of Infectious Diseases program supports research on the ecological, evolutionary, and social drivers that influence the transmission dynamics of infectious diseases. The central theme of submitted projects must be the quantitative or computational understanding of pathogen transmission dynamics. The intent is discovery of principles of infectious disease transmission and testing mathematical or computational models that elucidate infectious disease systems. Projects should be broad, interdisciplinary efforts that go beyond the scope of typical studies. They should focus on the determinants and interactions of transmission among any host species, including but not limited to humans, non-human animals, and/or plants. This includes, for example, the spread of pathogens; the influence of environmental factors such as climate; the population dynamics and genetics of reservoir species or hosts; the feedback between ecological transmission and evolutionary dynamics; and the cultural, social, behavioral, and economic dimensions of pathogen transmission. Research may be on zoonotic, environmentally-borne, vector-borne, or enteric pathogens of either

terrestrial or aquatic systems and organisms, including diseases of animals and plants, at any scale from specific pathogens to inclusive environmental systems. Proposals for research on disease systems of public health concern to developing countries are strongly encouraged, as are disease systems of concern in agricultural systems. Investigators are encouraged to develop the appropriate multidisciplinary team, including for example, anthropologists, modelers, ecologists, bioinformaticians, genomics researchers, social scientists, economists, oceanographers, mathematical scientists, epidemiologists, evolutionary biologists, entomologists, parasitologists, microbiologists, bacteriologists, virologists, pathologists or veterinarians, with the goal of integrating knowledge across disciplines to enhance our ability to predict and control infectious diseases.

Estimated Number of Awards: 12

Anticipated Funding Amount: \$24,000,000

In FY 2021, pending the availability of funds. That amount includes approximately \$11.0M from NSF for new standard or continuing awards, approximately \$7.5M from NIH for new or continuing awards, and \$5.5M from USDA for new awards. The expected funding from the UKRI for the UK component of the US-UK Collaborative Projects will be a maximum of £2M. The expected funding from the BSF for the Israeli component of the US-Israel Collaborative Projects will be a maximum of \$720,000. The expected funding from the NSFC for the Chinese component of the US-China Collaborative Projects will be a maximum of ¥9M.

Eligibility Information

Who May Submit Proposals:

The categories of proposers eligible to submit proposals to the National Science Foundation are identified in the *NSF Proposal & Award Policies & Procedures Guide* (PAPPG), Chapter I.E. Unaffiliated individuals are not eligible to submit proposals in response to this solicitation.

Who May Serve as PI: There are no restrictions or limits.

Limit on Number of Proposals per Organization: There are no restrictions or limits.

Limit on Number of Proposals per PI or Co-PI: 2

In a given year, an individual may participate as a PI, co-PI, or subaward lead on no more than **two** proposals submitted in response to this solicitation. **This limit does not include Research Coordination Networks (RCN) proposals.** In addition, an individual from Israel may participate in no more than **one** US-BSF proposal and an individual from China may participate in no more than **one** US-China proposal. Proposals in excess of the limit for any person will be returned without review in the reverse order received. Participating in a proposal as other senior personnel does not count in this limit. Changes in investigator roles post-submission to meet the eligibility limits will not be allowed. **It is the responsibility of the submitters to confirm that the entire team is within the eligibility guidelines.**

59 MDW/ST Summary of Funding Announcements for September 2020

- **Continuously Open Announcements:**

Special Operations Forces (SOF) open Broad Area Announcement (BAA) for USSOCOM Biomedical Research Advisory Group (BRAG) to fund biomedical, human performance, and canine research to identify and develop techniques, knowledge products, and materials (medical devices, drugs, and biologics) for early intervention in life-threatening injuries, prolonged field care (PFC), human performance optimization, and canine medicine/performance. SOF medics place a premium on medical equipment that is small, lightweight, ruggedized, modular, multi-use, and designed for operation in extreme environments. For more information: <https://www.grants.gov/web/grants/search-grants.html?keywords=W81XWH-USSOCOM>

The United States Army Medical Research and Development Command (USAMRDC) funds a broad range of extramural research programs. Awards are usually contracts, grants, or cooperative agreements. Research proposals can be submitted to the command through the USAMRMC Broad Agency Announcement (BAA), which is continuously open, or through special USAMRMC BAA Announcements, which are open for limited timeframes. Examples of programs with special announcements are the Breast Cancer Research Program, the Prostate Cancer Research Program, Gulf War Illness, and others. Additional information, the USAMRMC Broad Agency Announcement, and open special USAMRMC BAA Announcements can be obtained at <http://www.usamraa.army.mil/Pages/BAA.aspx>

USAMRMC also maintains a safe method for submitting new products and ideas for consideration: <https://mrmc-npi.amedd.army.mil/>; provides subject matter experts to assess products and ideas, evaluate their applicability to USAMRMC's mission, and provide feedback to the submitter for development and possibly funding.

711 HPW BAA: The Airman Readiness Medical Research (ARMR) Hybrid Broad Area Announcement (BAA) was released to solicit White Papers with the focus of conducting medical research in support of optimizing the warfighter by enabling, enhancing, restoring, and sustaining the Airman to more effectively execute the Air Force mission. This medical research objective is dual natured: (1) ensure medical availability of Airmen by analyzing attributes (sensory, behavioral, physiologic) and operational environments (chemical, physical, psychological, biological, radiological stressors) to drive optimal performance of Airmen engaged in high-demand, high-impact mission tasks (2) investigate how the flight environment affects the process of life, the ability to maintain homeostasis, and the risk for injury or secondary insult, seeking to ameliorate these stressors to optimize Airman health and performance. This BAA will remain open for seventy-two (72) months with Calls being released throughout the seventy-two (72) month period of performance.
